Consensus for regional outlook

*SWIOCOF-5, 19 to 23 September 2016
Seychelles*

Precipitation forecast

OND 2016 :

Below average rainfall is likely on the northern part of the region including Northern part of Mozambique, Comoros and northern Madagascar.

-Near to above average rainfall is likely over the southern part of the region including southern Mozambique and southern Madagascar.

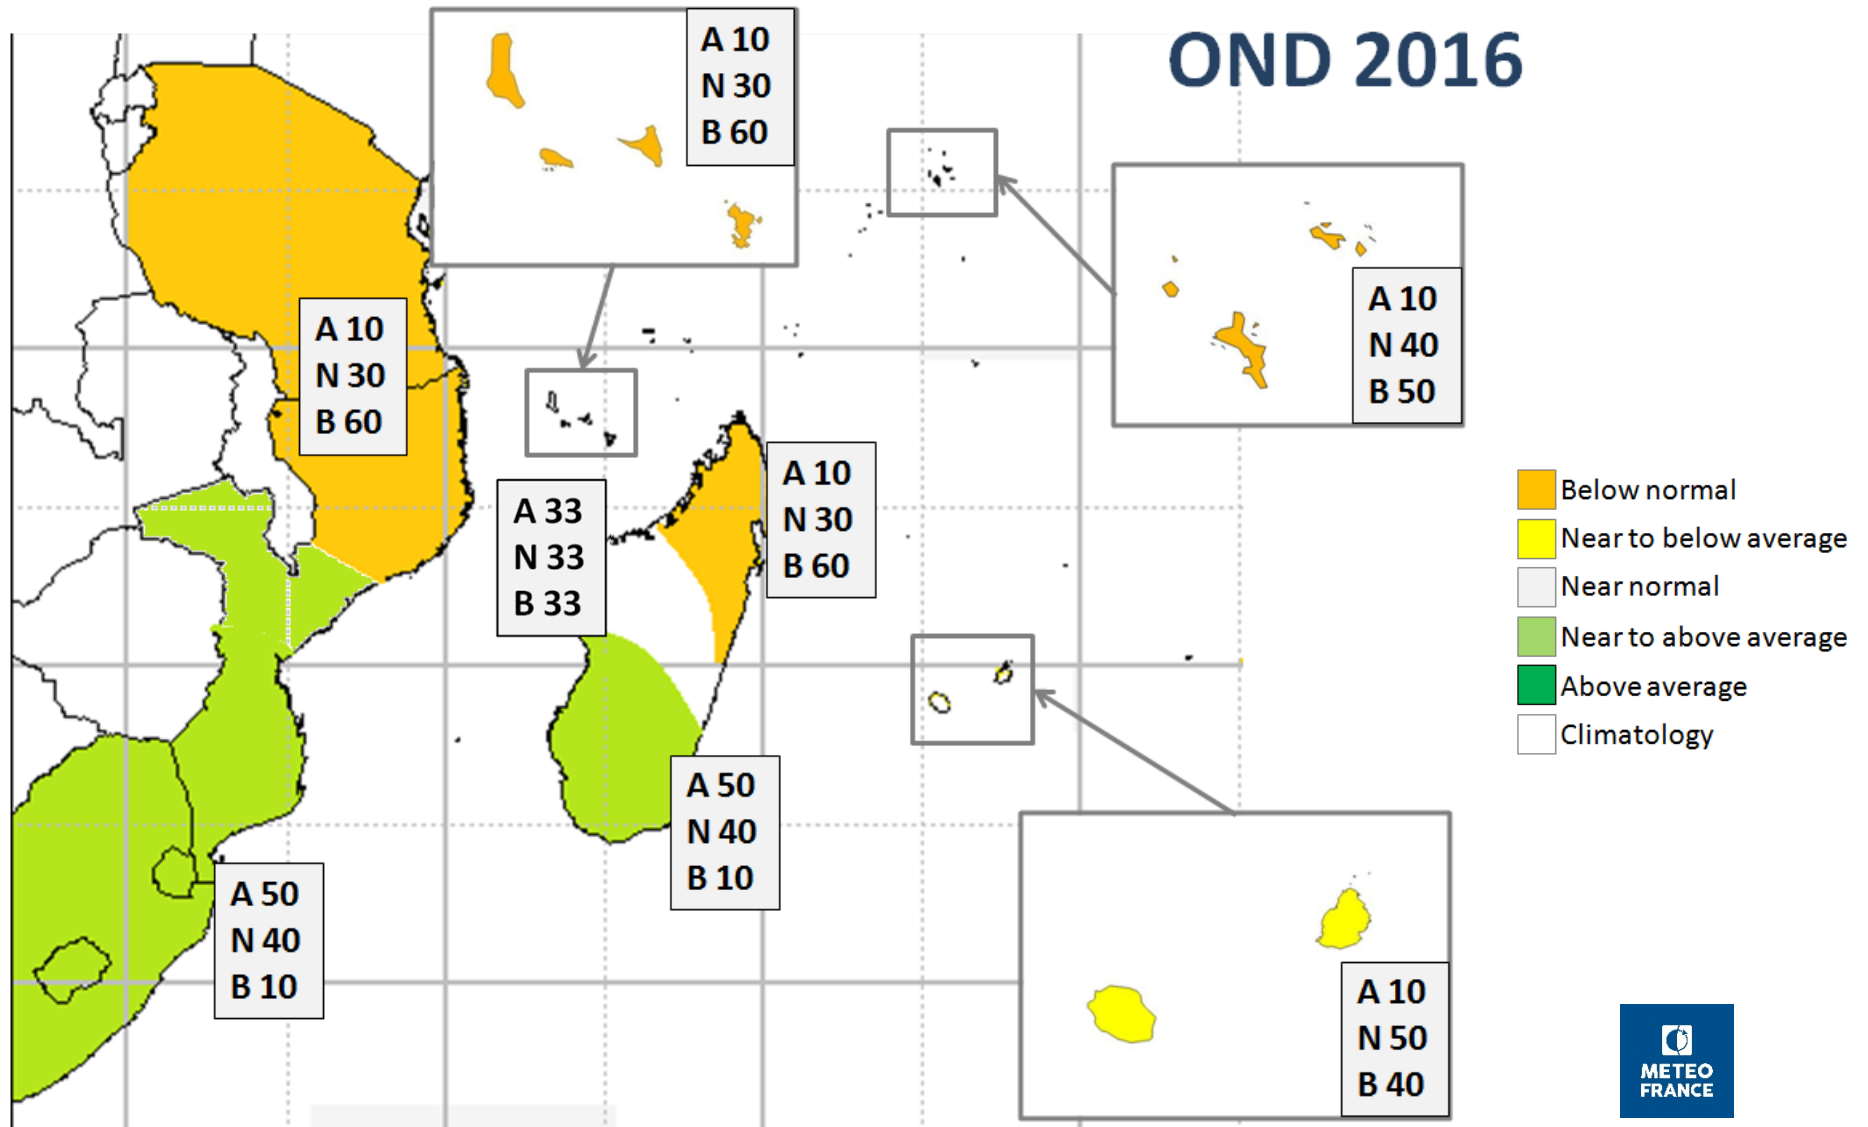

-Near to below average rainfall is likely over Mauritius and Reunion Islands.

NDJ 2016 :

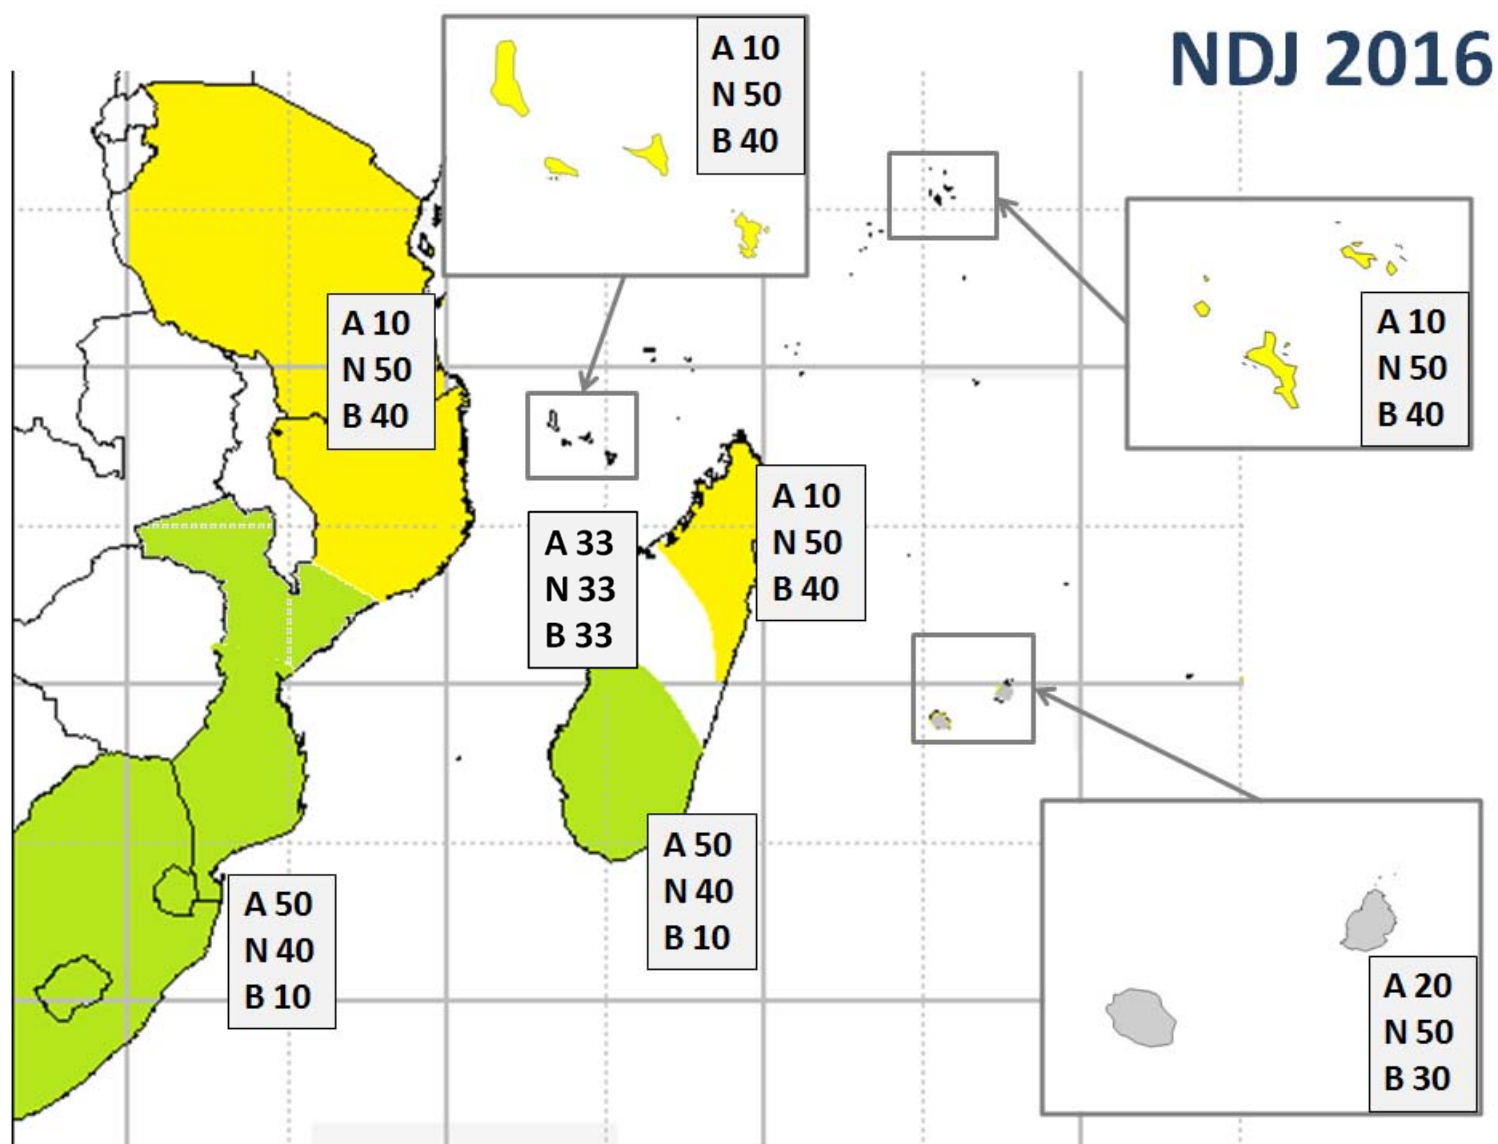

During this period, the dry signal on the northern part of the region is likely to weaken. Persistence of the above to near average forecast for the southern parts.

Precipitation forecast

OND 2016

Precipitation forecast

Cyclone activity

Cyclone activity :

- Number of tropical storms or cyclones are likely to be near to below average.
- Tropical storms or cyclones are likely to follow more westward tracks than usual.

An outlook update specific to the cyclone activity will be provided by RSMC Reunion in october 2016

Temperatures

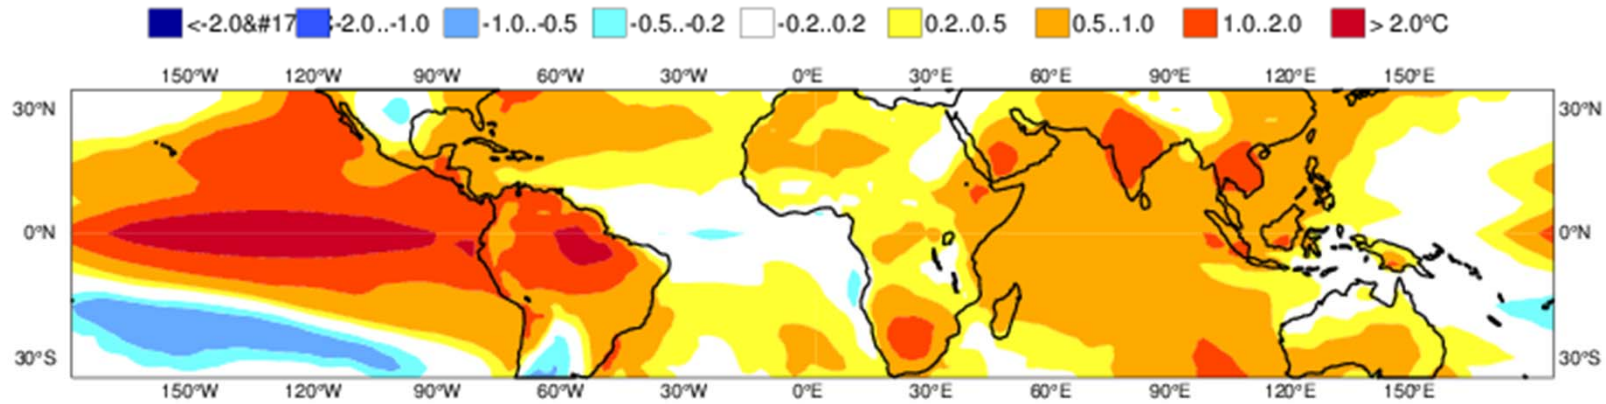

Temperatures :

Considering last summer season over most of the region that experienced significantly above average temperatures (close or at historical records), the upcoming summer 2016/2017 is likely to return to near average temperatures.
